

Landscape Architecture Project

Weber State University Educational Project

PROJECT DESCRIPTION:

- ◆ McNeil Engineering was contacted to lead the planning and design efforts for a proposed landscape remodel at the north entrance into the Student Services Center (SSC). This main entrance out of the SSC gives prospective students their first look at the campus and sets the tone for the quality image that the university strives to portray.
- ◆ McNeil Engineering completed the remodel of the outdated and overgrown landscape at the Shepherd Union Building and the site and irrigation improvements south of the Science Lab that included a complete renovation to the main campus pump house and filtration system. On both McNeil Engineering was involved throughout the construction process to ensure that the design was implemented properly beginning from the initial pre-bid meeting clear to the final inspection.
- ◆ Other projects completed by McNeil Engineering are two separate landscape and irrigation remodel projects. One is at the Wattis Business Building and the other is at the Lindquist Plaza.
