

PROJECT DESCRIPTION:

- In an effort to encourage residential water savings, the Jordan Valley Water Conservancy District (JVWCD) expanded their "Slow the Flow" ad campaign to include a reality-style makeover entitled "Water Quest" for two of their customer residences.
- JVWCD began the process by soliciting landscape designers as a part of a design competition and our team of Landscape Architects was chosen as the winner. Both properties began with very typical Wasatch Front landscapes, complete with an expansive lawn and little other planting.
- ◆ The lawn was replaced by drought tolerant plants, which incorporated all-season color, texture, and durability. A dry river bed, entry plaza, flagstone path and raised planters were included to not only provide areas that would not require water, but to provide additional amenities and interest to the design. A new updated drip irrigation system was designed and installed to maximize water efficiency through zoning and use of moisture sensor technology. The result is a beautiful, functional and water-efficient landscape that the families can enjoy for years.
