

LDS CHURCH  
CORNER CANYON WARD Building  
**Religious Project**

### PROJECT DESCRIPTION:

- ◆ For this project the facility manager wanted to decrease the slope of the existing parking lot to make it less hazardous to traverse in the winter. To accomplish this McNeil Engineering and the contractor had to extend an existing keystone retaining wall.
- ◆ We worked with the city and a geotechnical engineer to make sure we could provide a design that was both economical for the client and would still meet the strict requirements of the city.
